

VERDICT — Internal QA & Release Gates

Expert-signoff packet · not customer narrative

Case ID: `b639fdda-146c-48ec-9080-1e144ec7ceae` Run ID: `auto-1781289206` Verdict: **SUSPICIOUS**

These sections are the automated expert-review packet’s internal gates. They are not part of the customer report (`REPORT.html`); they exist so a human expert can see the machine QA status, release blockers, and the doctrine the engine enforced before approving customer release.

ANALYSIS DOCTRINE

The agent prepares an evidence-bound signoff packet; the human expert remains final authority for customer release.

RULE	SEVERITY	REQUIREMENT
<code>finding_tool_call_required</code>	blocker	Every Finding must cite a non-empty <code>tool_call_id</code> that exists in the case tool-call list.
<code>verify_finding_replay_embedded</code>	blocker	Customer-ready reports must embed verifier replay evidence for each Finding and every replay must match the audited tool output.
<code>verify_finding_replay_failures</code>	blocker	A verifier rejection or replay failure must force INDETERMINATE or blocked customer release, never NO_EVIL .
<code>execution_requires_two_current_artifact_classes</code>	blocker	Execution claims require at least two current-case artifact classes. Prefetch is preferred; Amcache, ShimCache, memory-only process evidence, YARA, Hayabusa, and malfind are not standalone execution proof.
<code>exfiltration_requires_staging_and_movement</code>	blocker	Exfiltration claims require staging or collection evidence plus network, tool, or data-movement evidence.

CHECK	STATUS	SUMMARY
<code>verify_finding_replay_embedded</code>	PASS	Every Finding carries embedded verifier replay evidence, or there are no Findings to replay.
<code>limitations_visible</code>	WARN	Analysis limitations must remain visible before customer release.
<code>no_forbidden_unqualified_language</code>	PASS	No forbidden unqualified language detected in Findings or customer-visible report text.
<code>attack_coverage_blind_spots</code>	WARN	ATT&CK coverage includes blind spots that require expert awareness.

CUSTOMER RELEASE GATE

This gate is written after `manifest_finalize` and `manifest_verify`; it is a post-finalize linkage artifact, not a replacement for the audited `verdict.json` hash committed before manifest finalization.

- QA status: `FAIL`
- Packet state: `BLOCKED_MANUAL_INVESTIGATION`
- Manifest verified: `False`
- Manifest signature present: `False`
- Signer: `ed25519`
- Expert approved: `False`
- Customer releasable: `False`

RELEASE BLOCKERS

- Execution wording appears without per-Finding current-case corroboration from two acceptable artifact classes.
- Exfiltration wording appears without both staging/collection and network/tool/data-movement coverage.
- customer release requires an effective `manifest_finalize` `signer=sigstore` (identity + transparency log); `ed25519` proves integrity offline but not identity, and stub signatures are dev/offline only
- explicit human expert approval is required before customer release
- finalized manifest signature metadata must be present before customer release
- `manifest_verify` must pass before customer release

READINESS STATE

- Packet state: `BLOCKED_MANUAL_INVESTIGATION`
- Ready for expert review/signoff: `False`
- Expert-review status: `pending`
- Ready for customer PDF: `False`

- Customer releasable: False

BLOCKERS

- Execution wording appears without per-Finding current-case corroboration from two acceptable artifact classes.
- Exfiltration wording appears without both staging/collection and network/tool/data-movement coverage.
- customer release requires an effective manifest_finalize signer=sigstore (identity + transparency log); ed25519 proves integrity offline but not identity, and stub signatures are dev/offline only
- explicit human expert approval is required before customer release
- finalized manifest signature metadata must be present before customer release
- manifest_verify must pass before customer release

FAILED CHECKS

- execution_requires_two_current_artifact_classes
- exfiltration_requires_staging_and_movement

WARNINGS
